About the fund

The Fisher Funds International Growth Fund aims to provide long-term growth by investing in quality international companies with strong growth potential. The fund includes a hand-picked portfolio of 20 to 40 growth companies located around the world. Our Investment Team do in-depth research to identify businesses that have a strong competitive advantage and a long runway for growth. The portfolio includes both large well-known businesses plus smaller companies with good growth prospects. Regardless of size, these businesses are typically market leaders in their field.

Why choose this fund?

If you are looking for higher potential growth in your investment over the long term and are comfortable with the volatility that comes with a higher risk fund, and also like the diversification offered by investing internationally, this fund could be a good choice for you.

as at 31 July 2025

Amazon.com Inc	8.1%
Microsoft Corp	6.9%
Mastercard Inc - A	6.1%
Cash	3.8%

Fund highlights for July 2025

The International Growth Fund fell -0.1% in July, compared to its benchmark of +3.2%.

Icon (+19.6%) and its clinical outsourcing peers had a strong month as end demand for clinical research has stabilised following several quarters of weakness, as pharmaceutical and biotech customers optimise spend in the face of competitive and regulatory headwinds. Icon anticipates the backdrop to continue improving as we go through the year.

Alphabet (+12.0%) was a positive contributor during July, supported by a good earnings result at the end of the month. Alphabet's main business units - Search, YouTube and Google Cloud Platform - all outperformed expectations. Google Search had better than expected growth and is benefitting from AI tailwinds as it rolls out new features such as AI Overviews, AI Mode and visual search. Google Cloud Platform also performed well in the quarter where it accelerated growth driven by customers running more AI workloads on the platform.

ASML (-10.6%) reduced its growth guidance for next year as tariff uncertainty and macroeconomic concerns weighed on its customers' willingness to commit to orders of its lithography machines used to manufacture advanced semiconductor chips. We believe this is largely cyclical, with structural demand for leading-edge chips expected to continue growing and used this weakness to add to our position.

While **Intuitive Surgical** (-12.0%) reported continued strength in procedure growth, unit sales of its DaVinci surgical robots were slightly below expectations, as health systems in Europe, China and Japan are increasingly cautious in making large capital expenditures. The US, which makes up most of Intuitive's revenue, continues to be strong, supported by the highly anticipated launch of its new DV5 robotic system.

Up close & personal

Sam Dickie looks at Alphabet, the parent company of tech giant Google.

What does it do?

Alphabet is the holding company which owns the world's leading internet search provider, Google. Google is the world's most visited website and the largest global advertising platform by advertising revenue.

Why do we own it?

Alphabet has wide moats arising from its dominant position in online search, significant intellectual property and a strong brand. We believe Alphabet is well-positioned to grow strongly as global advertising budgets gradually shift away from television to digital formats.
